Skin Lesion Classification on FPGA

by Lewis Turner

Research Report

Submitted in partial fulfilment for the degree of
BSc (Hons) Computer Science

Supervised by Dr. Rob Stewart

Heriot-Watt University
School of Mathematical and Computer Sciences

26th October 2026

Student ID	H00430662

Statement on Generative AI Use:

EDIT this statement to indicate what use you made of Generative AI for your project work and in preparation of this document. If your project is about developing or experimenting with Generative AI, you still need to indicate your Generative AI use beyond the developments and experiments. If you have not used Generative AI, indicate it explicitly.

ME

• Google Gemini 3.8 Flash (Extended Thinking) to assist in searching for relevant research papers.

• Google Gemini 4.0 Argon (thinking: Low - High) to assist setting up FPGA for use over Wifi.

By signing this form:

• I declare that the work I have submitted for this assessment is my own original work. I have not presented the ideas, words, data, code, designs, analyses, or other intellectual contributions of another person or system as my own.

• My submission is expressed in my own words except where the work of others has been appropriately acknowledged, cited, and referenced. All sources used in the preparation of this assessment, including books, journal articles, websites, software tools, and Generative AI tools, have been properly acknowledged.

• Where Generative AI tools have been used, I have complied with the course's stated policies regarding Generative AI use. I have clearly and accurately disclosed in the above statement box all uses of Generative AI in the assessment, including the specific tools used, the purpose for which they were used, and the extent to which any generated content influenced the final submission.

(form continues on next page)

(form continued from previous page)

• I understand that I remain fully responsible for the content, accuracy, integrity, and originality of my submission, regardless of any assistance received from Generative AI or other tools.

• I confirm that I have read, understood and followed the University's Regulations on academic misconduct as published on the University's website, and that I am aware of the penalties that I will face should I not adhere to the University Regulations.

• I confirm that I have read, understood and avoided the different types of plagiarism explained in the University guidance on Academic Integrity and Plagiarism.

7 Gen AI Summary 3

1 Introduction

First paragraph of the introduction.

1.1 Background and Motivation

1.2 Aim and Objectives

2 Literature Review

Grouping topic summaries, critical assessment, gaps
Possibly use RADAR?

2.1 Identify

Identify key topics, themes, points

2.2 Summaries and Critical Assessments

For each summary of literature & critical assessment of topic containing:
• How already published research fits together
• Areas of consensus & disagreement
• Areas of controversy/where further research is required

2.3 Further Research Recommendations

Address an identified gap/repeat the research

2.4 Achknowledgments

Sources for literature/statements
Inserting a dummy reference for the template [1].

3 Methodology

3.1 Requirements

4 Feasiblity

4.1 Preliminary Work

Summary of work carried out to prepare for this project to validate feasiblity.

4.2 Evaluation Strategy

Identify for the project:
• What needs evaulating
• Why it should be evaluated
• How it should be evaluated

5 Conclusions

Short summary of this doc

References

[1] Alan M. Turing. 2009. Computing Machinery and Intelligence. In *Parsing the Turing Test: Philosophical and Methodological Issues in the Quest for the Thinking Computer*, Robert Epstein, Gary Roberts, and Grace Beber (Eds.). Springer Netherlands, Dordrecht, 23–65. doi:10.1007/978-1-4020-6710-5_3

6 Project Management

6.1 Gantt Chart

Plan of activities to be carried out in semester 1, then future plan for semester 2

6.2 Analysis of Risks

Including mitigation plans

6.3 PLES

A well-researched consideration of any Professional, Legal, Ethical, and Social Issues pertinent to the project. (e.g. codes of conduct (BCS), codes of practice, standards, computer law, ethical decision making, intellectual property, social aspects, copyright, data protection, and so on).

7 Gen AI Summary

Summarising use of GenAI in project/deliverables
